It's got potential. Instead of *.chemistry, how about splitting the

classification into *.biochemistry (which are probably the topics

you're thinking of) and *.pharmaceutical (which otherwise might end up

in *. (bio)chemistry)?

(This is separate from the issue of whether there is sufficient potential

news volume to support either or both groups.)

I'll add 'em to my medical/health newsgroup wish list (which I'm looking

forward to posting and discussing -- but not for another 10 days or so).

Pete
