

I hope this is the correct newsgroup for this.

What is the scoop on Methanol and its future as an alternative fuel for vehicles ? How does it compare to ethanol ?

There was some news about health risks involved. Anybody know about that. How does the US Clean Air act impact the use of Methanol by the year 1995 ?

I think its Methyl Tertiary butyl ether which the future industries will use as a substitute for conventional fuels.

There is company Methanex which produces 12% of the world's supply of Methanol. Does anybody know about it ?

Please reply by e-mail as I do not read these newsgroups.

Thanks in advance.
