|| Now, if instead of using the MSG as a food additive, you put the MSG

|| in gelatin capsules or whatever, there may not

|| be a reaction, because the _sensory_response_ might be

|| a necessary element in the creation of the MSG reaction. (I'll bet

|| the bogus medical researchers never even thought about

|| that obvious fact.)

| Gee. He means "placebo effect." Sorry, but the researchers DO know about

| this.

Carl, it is not "placebo effect" if as hypothesised the

sensory response to MSG's effect on flavor is responsible

for the MSG reaction.
