I have the ATI Ultra Pro local bus with 2MB VRAM, and I am perfectly happy with

the Windows drivers (currently using version 59). It does everything you

mention below, but also does 1024x768x16bpp true color. As a matter of

fact it also supports high refresh 1280x1024 at 256 colors. The performance

is great.

Supposedly the new Matrox Ultra-something-or-other actually does some

3d rendering (at least has some hardware support for Z). Good luck in

your search.

Cheers,

Phil
